

UNCOMMON SCHOOLS

DESIGN GUIDELINES

LOGOS

LOGO GUIDELINES

Main Logo

TWO COLORS

ONE COLOR

Our logo is a visual representation of Uncommon and our commitment to advancing our mission. The main logo consists of the words UNCOMMON stacked on top of SCHOOLS, in all caps. The horizontal rules above and below create an organized system for the entire network of schools. The logo may appear in one color or two.

In rare cases when no color is available, the logo should exist in all black or white (not gray). See pg. 33 for color palette.

Whenever possible, use the two-color version of the logo. The primary execution of the logo is on a white background. For other color combinations and using the logo on a color background, see the Color section on page 32.

LOGO GUIDELINES

Extending the lines

The bars of the Uncommon logo may be extended to provide an underline for taglines or supporting text. See the Letterhead and Website homepage for examples.

TYPOGRAPHY

PRIMARY TYPEFACE

Knockout

Knockout is the primary typeface for the Uncommon brand. It is a bold, condensed font with many weights. The two weights used in the logo are 49 (UNCOMMON) and 48 (SCHOOLS). These fonts should be used for all headlines, menu/navigation, swag, printed matter, digital promo, and any large text above paragraph size.

Knockout 49 should be used as the primary headline font. Do not use for long body text exceeding one paragraph.

AaBbCcDdEeFfGgHhIiJjKk
LlMmNnOoPpQqRrSsTtUuVv
WwXxYyZz0123456789!?

Knockout 29 is the same width as 49 but a lighter weight. This is used for department names. Knockout 29 may be used for short passages of text up to 3 paragraphs. For all other long-form copy, use Libre Franklin (see next page).

AaBbCcDdEeFfGgHhIiJjKk
LlMmNnOoPpQqRrSsTtUuVv
WwXxYyZz0123456789!?

Knockout 48 is narrower and therefore will take up less space than 49; it should be used for school names and longer headlines. Do not use for long body text exceeding one paragraph.

PRIMARY TYPEFACE

Headline Type Rules

All caps works best for short copy lines, buttons, and headlines of 6 words or less. For longer headlines, use title or sentence case. For headlines that span more than one line, use the following formula to calculate the leading (line spacing):

Point size x 0.9 = Leading

All caps headline in Knockout 49

EXPERIENCE THE UNCOMMON DIFFERENCE

SECONDARY TYPEFACE

Libre Franklin

Libre Franklin is the secondary typeface. It is a free version of Franklin Gothic (available via Google Fonts) that is clean, readable, and suitable for long-form paragraph text and small scale use. It has many weights and includes Italics. Always use Regular as the text weight and Bold for any bolded text. Do not use Libre Franklin for headlines; always use Knockout.

Paragraph Type Rules

Point size x 1.25 = Leading

Column Width Rules

In general, the larger the text point size, the wider the column should be. The optimal number of words per line is 4-9. Avoid hyphenation whenever possible and use single-line composer for paragraph rags.

COLOR

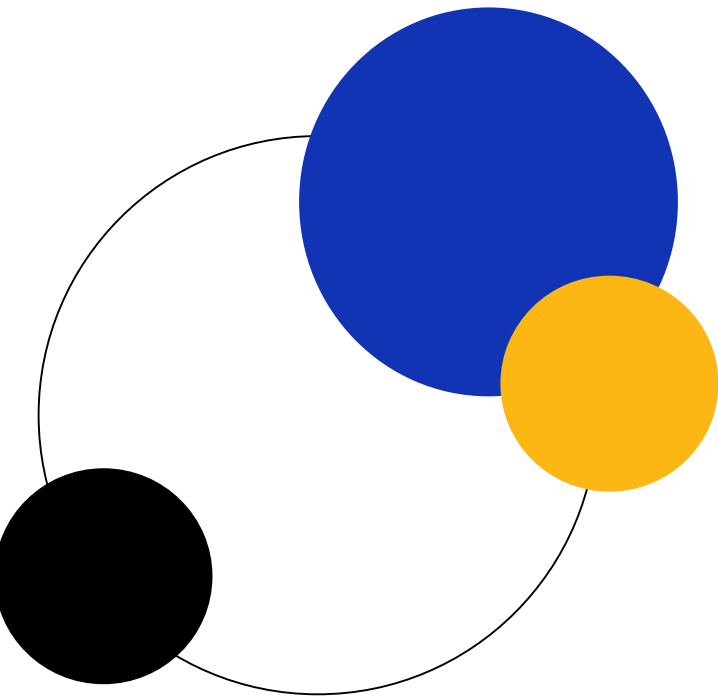

COLOR PALETTE

Primary Colors

Color plays an important role in Uncommon’s visual identity. Our primary colors are Uncommon Navy, Uncommon Yellow, black, and white. Always use Hex/RGB color space for digital/onscreen applications, and PMS (preferred) or CMYK for print applications. Never use CMYK for web graphics. All uniforms, signage, outdoor advertising, brochures, and promotional materials should use the primary color palette.

Quantity Ratio

Uncommon Navy

HEX: #1034B4
RGB: 16 52 180
PMS: 293C
CMYK: 99 84 0 0

Uncommon Yellow

HEX: #FFB500
RGB: 255 181 0
PMS: 7549C
CMYK: 0 31 100 0

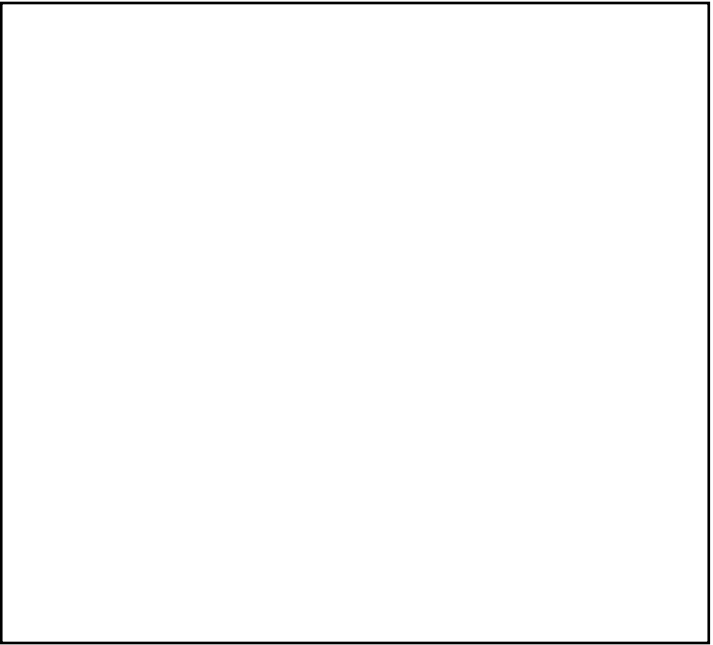

Uncommon Yellow is not accessible at small scales. It should only be used for the logo or short text above 19 pt. For all text below 19 pt, use Uncommon Navy or Black.

Black

HEX: #000000
RGB: 0 0 0
PMS: N/A
CMYK: 0 0 0 100

White

HEX: #FFFFFF
RGB: 255 255 255
PMS: N/A
CMYK: 0 0 0 0

For onscreen / digital:

RGB–Displays are made up of pixels that can display Red, Green, and Blue. Different intensities of each determine mixed colors.
HEX–This is how color is represented on the web. Each color is a # symbol followed by six digits, either letters or numbers or a combination.

For printed materials:

PMS–This stands for Pantone Matching System. These are pigment-based inks that represent “true” colors rather than composite color like CMYK or RGB. Use Pantone whenever possible for print.
CMYK–This stands for Cyan, Magenta, Yellow, and Black, which are mixed together to create any color. This color space is used in standard print applications when PMS is not available.

COLOR PALETTE

Logos on Color

Always be sure there is enough contrast between the logo and the background. When placing a one-color logo on Uncommon Navy, white will have a higher contrast and visibility than Uncommon Yellow.

Tools are available to help check color contrast, such as the Contrast Checker at webaim.org.

Any of these combinations are approved, and are interchangeable. The one color options should be used when printing capabilities are limited or when there are a lot of other colors in the design or photography, causing it to look very busy.

When developing new ad campaigns and external-facing collateral, it is preferable to use a white background, especially when full-color photography is included.

TWO COLORS

ONE COLOR

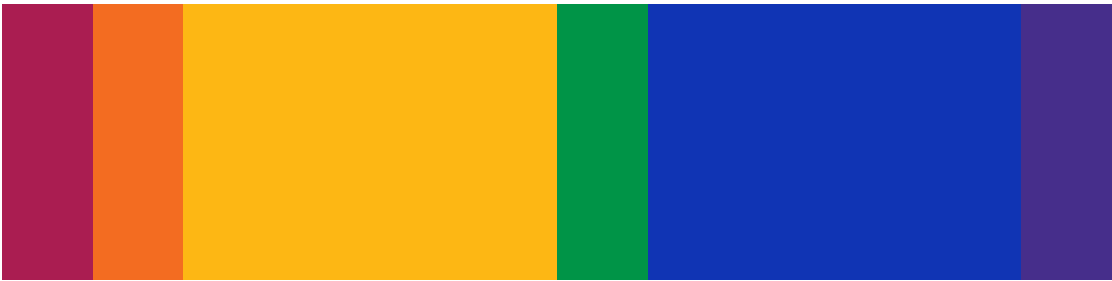

COLOR PALETTE

Secondary Colors

These secondary colors may be used in support of the primary palette. Only use these colors as text or graphic elements on a white background (never as a background color; only Primary colors should be used as backgrounds). Always include Primary colors in the design in combination with Secondary. Secondary colors are not essential to the identity and should be used sparingly (only one or two at a time), with focus on the Primary color palette for brand strength.

Potential uses for secondary colors include swag, school-specific programs, and seasonal or special event branding.

On the right are example uses showing Secondary colors in combination with Primary colors.

Primary / Secondary color balance

Maroon
